

Church Street Development

A17045 Church Street Render

Located on the fringe of Kingston, Church St Development takes precedent from the surrounding buildings though a prominent material palette consisting predominantly of concrete, timber and metal sheet cladding with greenery scattered throughout. With a sloping site directly off Church Street, the proposal required specific considerations for maximal commercial tenancy on the ground floor, as well as two levels of residential apartments above. Decrolux was involved for the lighting design & supply.

The mixed use development is an appropriate response to this site and compliments the mix of uses and facilities in the surrounding area. The proposed combination of commercial and residential uses supports and contributes positively to the existing character of the place and the site considerations of Kingborough.

PROJECT DETAILS

Location	Kingston TAS
Architect	LXN Architecture & Consulting
Builder	Hutchinson Builders
Electrical Contractor	Energy Solutions
Electrical Wholesaler	D&W Electrical - Hobart
Completion	2019

Second Floor No Logo

Products Used

TITAN 30W
